Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 25 January 2007.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1, 3-6, 8-10, 12, 13, 15-17, 19-21, 23, 24, 26-29, 31-33 and 35 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1, 3-6, 8-10, 12, 13, 15-17, 19-21, 23, 24, 26-29, 31-33 and 35 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This office action is in response to applicant's communication of 1/25/2007. Currently amended claims 1,3-6, 8-10,12-13,15-17, 19-21,23-24,26-29,31-33, and 35 are pending and stand rejected below.

Response to Arguments

Applicant's arguments with respect to claims 1,3-6, 8-10,12-13,15-17, 19-21,23-24,26-29,31-33, and 35 have been considered but are moot in view of the new ground(s) of rejection. See below.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to

Art Unit: 3767

consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1,3-6, 8-10,12-13,15-17, 19-21,23-24,26-29,31-33, and 35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shaw (U.S. Patent Number 5,779,679) in view of Shaw (U.S. Patent Number 6,210,371). Shaw discloses a multifunctional safety infusion set with injection needle retractable in a wing-equipped sheath comprising: a hub (32, 34) having a distal end, a proximal end, and an axial through hole (36), further supporting a pair of flexible extension arms (arms of 40); a cannula (16) joined to said hub adjacent the distal end of said hub, said cannula having a beveled edge (17) at a distal end thereof; a cylindrical sheath (27) attached thereto, said cylindrical sheath retaining said hub therein and having a distal end and a proximal end, said hub being slidable along an inner surface of said cylindrical sheath from a first position at which the distal end of said cannula joined to said hub projects beyond the distal end of said cylindrical sheath by a predetermined length (see position at figure 1), to a second position at which said distal end of the cannula is protectively contained within said cylindrical sheath (see figure 2 position); a pair of flexible wings (18, 20) provided on the outer peripheral surface adjacent the distal end of said cylindrical sheath; and a first locking mechanism and a second locking mechanism (48,47 and 44) disposed on said assembly, whereby said first locking mechanism (44) releasably locks said hub and said cylindrical sheath at the first position, and said second locking mechanism (47,48) unreleasably locks said hub and said cylindrical sheath at the

second position (figure 2). Further Shaw discloses the first locking mechanism (44) comprises a pair of flexible extension arms supported by said hub (arms 40) and a groove (identified above) formed on the inner surface of the proximal end of said cylindrical sheath, wherein when said hub is at the first position in relation to said cylindrical sheath a pair of tips of said pair of flexible extension arms releasably engages the groove and the locking tab releasably engages a proximal end of the flexible extension arms (see figure 1 and 2). Shaw discloses a pair of slots formed in the proximal end of said cylindrical sheath (see above), wherein when said hub is at the second position in relation to said cylindrical sheath a pair of tips of said pair of flexible extension arms unreleasably engages said pair of slots. The Shaw flexible extension arms extend from approximately a center of the hub toward the distal end of the hub (fig 3). Further the cannula of Shaw is rotateable relative to the cylindrical sheath. The Shaw winged needle assembly has a hub marked to indicate an orientation of the bevel edge of the cannula relative to the cylindrical sheath (as in contoured form in figure 5). Shaw discloses a winged needle assembly with a locking tab (20 as in figure 1) that includes a projection (50) that is inserted through a slot in the cylindrical sheath to releasably engage the proximal end of the pair of flexible extension arms (40 in figure 1).

It is examiners position that these locking tabs are fully capable of being rotateable over at least a 180-degree arc (fig 5 and 6 show living hinge). But in the alternative if not inherently or implicitly in the Shaw reference it would have been an obvious modification to increase the locking tab rotatable range to at least 180 degrees since it

has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233 (CCPA 1955). In Shaw it is not known what the full rotatable range is of element 20, and if not fully anticipating a rotatable range of 180, it would be an obvious modification to increase the range to 180 or more in order to provide a flexible, resilient and deformable mechanism for locking and releaseability.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Phillip Gray whose telephone number is (571) 272-7180. The examiner can normally be reached on Monday through Friday, 8:30 a.m. to 4:30 p.m. EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Sirmons can be reached on (571) 272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
